PROFESSIONAL SUMMARY

Software engineer with experience building secure, scalable web platforms across enterprise SaaS and multi-cloud environments. Proven track record delivering authentication infrastructure (SSO, MFA, OAuth, RBAC), micro-frontend performance optimization, and core platform features serving customers across multiple hyperscalers and global regions. Skilled in leveraging AI-assisted development tools to accelerate delivery and improve code quality. Strong in JavaScript/TypeScript, React, and Node.js.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C, C++, SQL

Frontend: ReactJS, Next.js, Module Federation, Webpack, Tailwind CSS, Framer Motion, Storybook

Backend: Node.js, NestJS, Express.js, gRPC, REST APIs

Auth & Security: OAuth 2.0, SSO, SAML, OIDC, SCIM, RBAC, OPA (Open Policy Agent), MFA/TOTP

Databases: SQL, MongoDB, Redis, Firebase, Supabase

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Jenkins, GoCD, ArgoCD, CI/CD

AI / ML Engineering: RAG (Retrieval-Augmented Generation), LangChain, Prompt Engineering, AI Agents, LLM Workflow Automation, Vector Embeddings

Testing & Tools: Selenium, Playwright, Git

PROFESSIONAL EXPERIENCE

Associate Software Engineer, Contentstack

Aug 2025 – Present

- Architected and implemented a **centralized login service** authenticating users across **7 production environments** (3 hyperscalers: AWS, GCP, Azure; 3 regions: NA, EU, AU), 3 staging, and 22 development environments, maintaining **100% uptime** with SSO, MFA/OTP, backup codes, and password recovery.
- Designed and shipped **end-to-end granular Role-Based Access Control (RBAC)** across the monolith and 4 microservices, improving access-control granularity and aligning with industry security standards.
- Built **bi-directional (Bi-Di) multi-language support** into the login experience per region and a **CMS-configurable login page** enabling marketing and advertisement content to be managed dynamically.
- Created and maintained reusable **AI skills for engineering teams**, focused on authentication and platform workflows, reducing onboarding friction and ramp-up time across the codebase.
- Built automations using **Claude routines** to detect and remediate **Snyk** vulnerabilities, reducing open findings from **500+ to zero** by automatically raising pull requests and posting them to **Slack** for team review.
- Developed **AI-powered code-review automations** that review pull requests and validate code changes against the **acceptance criteria of the linked Jira ticket**, improving review quality and consistency.
- Implemented an **AI agent** that automatically responds to customer issues in Slack channels, drawing context from product **documentation, prior chat history, data logs, and the codebase**.
- Implemented **OAuth 2.0 support** for customer-facing APIs, enabling customers to build secure third-party integrations through a standards-compliant, token-based authorization flow with scoped access.
- Adopted new organization-wide **branding** across the monolith and **10+ microservices**, ensuring a consistent user interface and a cohesive brand experience across every customer-facing product surface.
- Contributed to core platform features including **SSO, SCIM, Teams, user management, and security**.

Associate Software Engineering Intern, Contentstack

Jan 2025 – Jul 2025

- Implemented **TOTP-based Multi-Factor Authentication (MFA)** compatible across all major authenticator apps, with **SMS-based 2FA** fallback and **backup codes**, following industry security standards.
- Integrated a newly acquired product (**Lytics**) by building **SSO-based authentication** between Contentstack and Lytics, delivering a seamless cross-SaaS user experience with a single set of credentials.
- Optimized **micro-frontend** performance (React v18 + Module Federation), reducing frontend application latency by **2x**, and documented comparative benchmark data to guide architecture decisions.
- Implemented **OPA policy-based navigation and app switcher** across **10+ micro-frontends**, backed by end-to-end **test automation** to ensure consistent, reliable behavior across frequent releases.
- Built an **RSS feed** for the organization to keep subscribers updated and improve product **SEO**.

EDUCATION

B.Tech, Computer Science and Engineering

2025

Sri Manakula Vinayagar Engineering College | CGPA: 8.5 / 10

PROJECTS

Real-Time Chat App | React 18, TypeScript, Vite, Tailwind CSS, Firebase | cichatapp.netlify.app

- Built a serverless 1:1 real-time messaging app with voice notes, reactions, replies, read receipts, and typing/presence indicators, using Firestore for live sync, Firebase Auth for multi-user sign-up/login, and Cloud Storage for voice messages.

EventHub | ReactJS, Tailwind CSS, Node.js, Firebase | eventhubproject.netlify.app

- Developed a web platform for colleges and universities enabling event registration, enrollment, and advertising for students and institutions, with real-time data via Firebase.

CERTIFICATIONS

- Introduction to Prompt Engineering for Generative AI, LinkedIn Learning, 2025
- Prompt Engineering with ChatGPT, LinkedIn Learning, 2025
- AI and Developer Productivity, LinkedIn Learning, 2025
- MongoDB Database Administrator, MongoDB, 2024
- Python for Data Science, NPTEL (IIT), 2023
- Microsoft Azure DevOps, Ethnotech, 2024
- Cyber Security, Ethnotech, 2024
- CCNA M1 (Routing & Switching), Ethnotech, 2023
- AWS Academy Cloud Foundations, Ethnotech, 2023
- Blockchain Foundations, 2022
- Web Programming II (Angular, jQuery, Databases), Ethnotech, 2022
- Web Programming I (HTML, CSS, JavaScript), Ethnotech, 2022

LANGUAGES

English, Tamil, Hindi
