PROFESSIONAL SUMMARY

Software engineer building secure, scalable products across enterprise SaaS and multi-cloud environments. Delivers authentication and authorization infrastructure, performance optimization, and core platform features across hyperscalers and global regions. Builds and deploys AI agents and automations that accelerate delivery and improve code quality.

PROFESSIONAL EXPERIENCE

Associate Software Engineer, Contentstack *Aug 2025 – Present*

- Designed and shipped **end to end granular Role-Based Access Control (RBAC)** across the monolith and 4 microservices, improving access control granularity and aligning the whole platform with industry standard security practices.
- Architected a **centralized login service** across **7 production environments** (AWS, GCP, Azure in NA, EU, AU), 3 staging, and 22 dev environments with **100% uptime**, SSO, MFA/OTP, backup codes, password recovery, and **Bi-Di** LTR/RTL support.
- Deployed an **AI agent** that answers every customer support message in Slack with **90%+ accuracy**, drawing context from product documentation, prior chat history, data logs, and the codebase to give grounded, context aware answers.
- Launched a **CMS configurable login page** so marketing can publish campaigns and advertisements without code changes.
- Created reusable **AI skills** for engineering teams, reducing onboarding friction and ramp up time across the codebase.
- Automated **Snyk** vulnerability remediation using **Claude routines**, reducing open findings from **500+ to zero** by raising pull requests automatically and posting each one to the team Slack channel for engineer review before merging.
- Built **AI powered code review automations** that review **20+ pull requests a day across 10+ services**, validating every code change against the acceptance criteria of its linked **Jira** ticket and flagging any gaps before human review.
- Delivered **OAuth 2.0 support** for customer facing APIs, enabling customers to build secure third party integrations and apps through a standards compliant, token based authorization flow with fine grained scoped access per client.
- Rolled out new organization wide **branding** across the monolith and **10+ microservices** for a consistent user interface.
- Developed core platform features spanning **SSO, SCIM user provisioning, Teams, role management, and account security**.

Associate Software Engineering Intern, Contentstack *Jan 2025 – Jul 2025*

- Implemented **TOTP based Multi-Factor Authentication (MFA)** across all major authenticator apps, with **SMS based 2FA** fallback and **backup codes**, following industry security standards to protect user accounts across the platform.
- Integrated the acquired product **Lytics** through **SSO based authentication** for a seamless cross-SaaS experience.
- Optimized **micro-frontend** performance across the platform (React v18 + Module Federation), reducing application latency by **2x**, and documented before and after benchmark data that guided later frontend architecture decisions.
- Engineered **OPA policy based navigation and an app switcher** across **10+ micro-frontends** with **test automation**.
- Built an **RSS feed** for the organization to keep subscribers updated on product releases and improve product **SEO**.

PROJECTS & OPEN SOURCE

Tagalong: Real-time Group Trip Planner | github.com/ChandrajCJ/tagalong

TypeScript, React Native, Fastify, PostgreSQL, Drizzle ORM, Redis, WebSockets, BullMQ, Ollama, Firebase, Docker

- Built a cross-platform (Android, iOS, web), offline first group trip planner where friends join via invite links to build a live multi-destination itinerary with weather, maps, route optimization, and calendar sync, plus group chat with polls, media, @mentions, and read receipts, live location sharing, shared photo and video albums on a map, a collaborative trip journal, bookings imported from email, packing lists, budgets, and multi-currency expense splitting with one tap UPI settle up.
- Integrated **self-hosted AI** for itinerary drafting from the group's ideas and bookings, chat catch up summaries, and receipt scanning, and engineered a **WebSocket gateway over Redis pub/sub**, preference aware push notifications, an Android home screen widget, and over the air updates, shipped at zero cost on free cloud tiers with CI and **450+ automated tests**.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, C, C++, SQL
Frontend & Mobile: ReactJS, React Native (Expo), Next.js, Redux Toolkit, Module Federation, Webpack, Tailwind CSS, shadcn/ui
Backend: Node.js, NestJS, Fastify, Express.js, gRPC, REST APIs, WebSockets, BullMQ
Auth & Security: OAuth 2.0, SSO, SAML, OIDC, SCIM, RBAC, OPA, MFA/TOTP
Databases: PostgreSQL, Drizzle ORM, MongoDB, Redis, Firebase, Supabase
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Jenkins, GoCD, ArgoCD, CI/CD
AI / ML: RAG, LangChain, Ollama, Prompt Engineering, AI Agents, LLM Automation, Vector Embeddings
Testing & Tools: Jest, Playwright, Selenium, Storybook, Automated Testing
Spoken Languages: English, Tamil, Hindi

EDUCATION

B.Tech, Computer Science and Engineering | Sri Manakula Vinayagar Engineering College | CGPA: 8.5 / 10 *2025*
